

Raincheck Plus

Siloxane-based professional water-repellent for masonry (alkali-resistant)

www.rtcgroup.co.uk

Description

Raincheck Plus is an advanced colourless water-repellent for masonry based on UV resistant siloxane resins. It is alkali resistant, and can therefore be used in situations where other siloxane-based water-repellents are not suitable. Raincheck Plus can be used on old and new buildings to protect against penetrating damp with the added advantage of keeping masonry cleaner. Raincheck Plus will not block the pores in masonry so water vapour is able to escape allowing the building to 'breathe'. It is UV resistant and will not be easily degraded by the Sun's UV radiation like less advanced products and can therefore last many years.

Survey & Application

A survey of the external surface by our fully qualified waterproofing surveyors is carried to ensure suitability to receive treatment. Professional multi-coat application is essential to ensure maximum lifespan of the product. Any doors, windows or glass surfaces are temporarily covered before Raincheck Plus is applied using a low pressure spray. Raincheck Plus is fast curing and water-repellence will be attained within a few hours.

Guaranteed Piece Of Mind

Case studies have shown external water proofing with this type of specialist professional grade product can last many many years.

In this example the wall was originally treated and tested with a fore-runner to Raincheck Plus over 30 years ago and can be seen to be still effective in the bottom picture.

Product life is dependant on the type and condition of the wall being treated however. Because every property is inspected by our fully qualified waterproofing surveyors and Raincheck Plus is applied by our experienced trained technicians in most cases we are able to offer a full 10 year guarantee for complete piece of mind.
